

Questions

1. Which symptom of the following is caused by Datura poisoning?
 - A. Delusion
 - B. Delirium
 - C. Dementia
 - D. Depression
 - E. Dysuria

2. The management approach for Datura poisoning is based on:
 - A. Serum toxic level
 - B. Computed tomography (CT) of the brain
 - C. Toxidrome
 - D. Serum glucose level
 - E. Electrocardiography (ECG)

3. The active constituents in the Datura plant binds to _____ receptors, thus interrupting parasympathetic innervations.
 - A. Alpha adrenergic
 - B. Beta adrenergic
 - C. Nicotinic acetylcholine
 - D. Muscarinic acetylcholine
 - E. Dopaminergic

4. The anticholinergic symptoms caused by Datura poisoning are usually _____ in presentation.
 - A. Slow
 - B. Moderate
 - C. Prolonged
 - D. Delayed
 - E. Rapid

5. What is the function of physostigmine?
 - A. Reversible cholinesterase inhibitor
 - B. Irreversible cholinesterase inhibitor
 - C. Semi-reversible cholinesterase inhibitor
 - D. Cholinesterase agonist
 - E. partial cholinesterase agonist
